2005 Graduate Cadetship

Spatial Vision specialises in the delivery of innovative geospatial solutions.

As part of our ongoing Graduate Placement Program, Spatial Vision is calling for expressions of interest from recent IT or Geomatics graduates to be appointed as Spatial Vision's Graduate Cadet for 2005.

Spatial Vision proposes offering a 12 month cadetship (commencing around February 2005) to a recent graduate keen to develop their practical expertise and commercial experience in the spatial information industry.

This Cadetship has been offered over the last two years and has proven to be an extremely valuable kick-start to the careers of those appointed.

The Spatial Vision Cadetship was exactly the sort of hands-on experience I was looking for. The 12 months I spent at Spatial Vision exposed me to a range and depth of project experience simply not possible anywhere else. The projects undertaken varied between playing a supporting role as part of a dedicated team of spatial professionals, to key consulting positions, and even project management. At every step, I was supported by a friendly team of professionals, always willing to help and share their wealth of knowledge with me. I can't speak highly enough about the Spatial Vision Cadetship.
(Cam Botherway, SV Cadet for 2003)

My experience as the Graduate Cadet at Spatial Vision has involved a highly beneficial learning curve. Together, the friendly working environment and the diverse range of project work have made my time here nothing short of enjoyable. The role has provided challenges along the way however, I don't think I could have asked for a better start to my professional career.
(Jess Ngo, SV Cadet for 2004)

Written expressions of interest should address the requirements set out in the Information Sheet (which can be downloaded from Spatial Vision's website – www.spatialvision.com.au) and be forwarded to the attention of Mr Glenn Cockerton, Managing Director, Spatial Vision, via e-mail (address: info@spatialvision.com.au) by December 16th 2004.
